Linux Survival Kit

— Copy/Paste maybe done with the mouse only :

    1. Select the aera to copy

    2. Put the mouse pointer where you want to paste

    3. A single "middle clic" will paste

— Always keep a terminal open

— Use the tabulation to complete command or file names (when not ambiguous).

— Know at least the 10 following commands :

cp org dest	copy org in dest
mv org dest	rename (thus move) org toward dest
rm nomfic	suppress nomfic from the current directory
mkdir nomrep	create the directory nomrep in the current directory
cd dest	change from current directory to the dest directory (.. for the upper directory, empty for home)
ls	output the list of visible files from current directory
pwd	output the complete path of the current directory
more file	output the content of the file (q to quit)
man nomcom	output the manual of the command nomcom
grep word dest	output lines of file dest containing word
